Program : Master of Project Management

Semester : One

Assignment : concept of sustainability in project management

Facilitator : Dr. Abdulkadir NoorJibril

Deadline : 05/08/2023

Submission Date: 05/08/2023

6.0 Reflective Individual Essay

The project assignment tasks for the well drilling project in Washaqo was thoughtfully prepared and planned by Hafsa Noor Ali, Abdikhadar Omar Ibrahim, and me Shani Abdi Mohamed. The objectives of the project were clearly defined, and the alignment with SDG7 was recognized. The stakeholders were identified, and the project team was established with roles and responsibilities clearly defined.

The project timeline and budget were also specified, providing a clear idea of the project's scope and feasibility. The inclusion of local workers and contractors in the project team is also commendable as it provides opportunities for skill development and economic empowerment within the local community.

Furthermore, the inclusion of regular feedback and performance reviews in the project plan ensures that the project stays on track and can be adjusted if necessary. Overall, the project assignment tasks have been well-constructed and comprehensive, providing a strong foundation for successful project implementation.

Throughout the course of learning PMBOK, I have gained a conscious and thorough understanding of the scenario of project management. I have been trained to understand concepts and processes, but I have been able to reflect on how the principles and techniques of PMBOK can be applied in real-world scenarios.

The course has helped me understand how project managers can use PMBOK to initiate, plan, execute, monitor and control, and close projects effectively. The course has also helped me to appreciate the importance of project management in achieving organizational goals.

One of the key takeaways from the course is that project management is a complex process that requires careful planning, execution, and monitoring. Effective project management involves the use of tools and techniques such as risk management, stakeholder management, and communication management. Additionally, project management requires a strong understanding of project scope, time, cost, quality, and resources.

Another important lesson from the course is that project managers must be able to adapt to changing circumstances. They must be able to adjust their plans and strategies as needed to ensure that the project is completed on time, within budget, and to the desired quality standards. This requires flexibility, creativity, and the ability to think critically and strategically.

The course has helped me see how project management can be applied to a wide range of industries and projects. From construction and engineering to healthcare and technology, project management is a crucial component of achieving success. The course has also helped me appreciate the importance of collaboration and teamwork in project management. Effective project management requires the ability to work with different stakeholders, including team members, clients, and vendors.

Overall, the course has provided me with a comprehensive understanding of project management and its importance in achieving organizational goals. The principles and techniques of PMBOK can be applied to a wide range of projects, and effective project management requires a combination of knowledge, skills, and experience. By understanding the scenario of project management and the principles of PMBOK, I feel better equipped to tackle complex projects and help organizations achieve their goals.
